## About Us

we at ATP Piróg have made it our mission to create the world easier and safer for wild animals.

We create many different products, but always those that are suitable for the animals.

**We are  
trustworthy**

We work with companies that are important to us and help us on our way to our goal. They help us create a better world for wildlife.

**Let's do this  
together**

Join us and together let's create products that will be helpful for animals and customers will be happy to download them from store shelves.

IT'S WORTH TO HAVE PARTNERS

Tikkurila plays with us...

It is thanks to Tikkurila that we have paints that are not only safe, but also resistant to weather conditions!

Oh, and above all, they catch the eye of buyers.

Now you too can create your individual color with us.

Here are some of the available colors.

and much more...

## Description

### Mason Bee / Bumblebee

They are very hardworking and safe bees. They don't sting. They pollinate many plants that bloom in spring – thus increasing their future yield.

For these insects, the house should have tubes of reeds, thick grass or bamboo poles.

### Earwig

They are considered beneficial insects because they are predatory and eat pests of crop plants, e.g. aphids, small caterpillars, mites, and midges.

### Golden-eyed lacewing

It is a predatory insect that eats large amounts of aphids. If we want to help it survive the winter, we should fill part of the insect house with dry leaves or hay and close its front part with a red board with holes. The red color attracts the golden-eyed lacewing.

### Butterfly

Butterflies, just like bees, pollinate the plants in our garden. If we want to make room for these insects, we should place several vertical sticks in the house and close them with a board with longitudinal vertical holes.

### Beetle / Ladybug

Small beetle individuals, e.g. ladybugs, feed on crop pests, including: aphids, young caterpillars, midges, etc. However, these large beetles will even eat a snail.

If you want to attract these useful insects to your garden, prepare a place in your insect house and fill it with cones, dry leaves or needles from the forest.

# ATP GARDEN – Single products for beneficial insects

Shipped in a cardboard box or loose on a euro pallet
